

AAV TAb Kits

Introducing AAV TAb Kits

Accurate. Fast. Reliable. Detect IgG against AAVs Like Never Before.

What Are AAV TAb Kits?

The TAb kits are ready-to-use solutions for detecting total IgG antibodies against Adeno-Associated Virus (AAV) using an ELISA-based platform. Whether you're in discovery, preclinical, or manufacturing stages – our kits provide consistent, reproducible results you can trust.

Kit Contents

- Coated 96-well plates
- Buffer solutions
- Standards & controls
- Detailed protocol

Why Choose AAV TAb Kits?

- **High Sensitivity & Specificity**

Detect total IgG against multiple AAV capsids.

- **Fast Turnaround**

Get test results when you need them

- **Easy to Use**

Simplify protocol with ready-to-use reagents.

Who Uses AAV TAb Kits?

Biotech companies | Gene therapy developers
CDMOs | CROs | Academic labs

If you're working with AAV, these kits belong in your workflow!

- **Lot-to-Lot Consistency**

Designed for reproducibility and accuracy.

- **Qualified Across AAV Serotypes**

Includes AAV2, AAV5, AAV6, AAV8, AAV9, and more.
